planeus Partner

# planeus - Your Manufacturing Software of Tomorrow…

Langcroft Consultancy are the sole UK Partner for planeus, the unique and powerful cloud based graphical planning and scheduling system. Not only will it connect to existing ERP systems to create Gantt chart plans, it also has factory routing with resource feedback to give real time (start / interruption / completion) updates to back to the plan. It will even report yield, waste and length of operational running time.
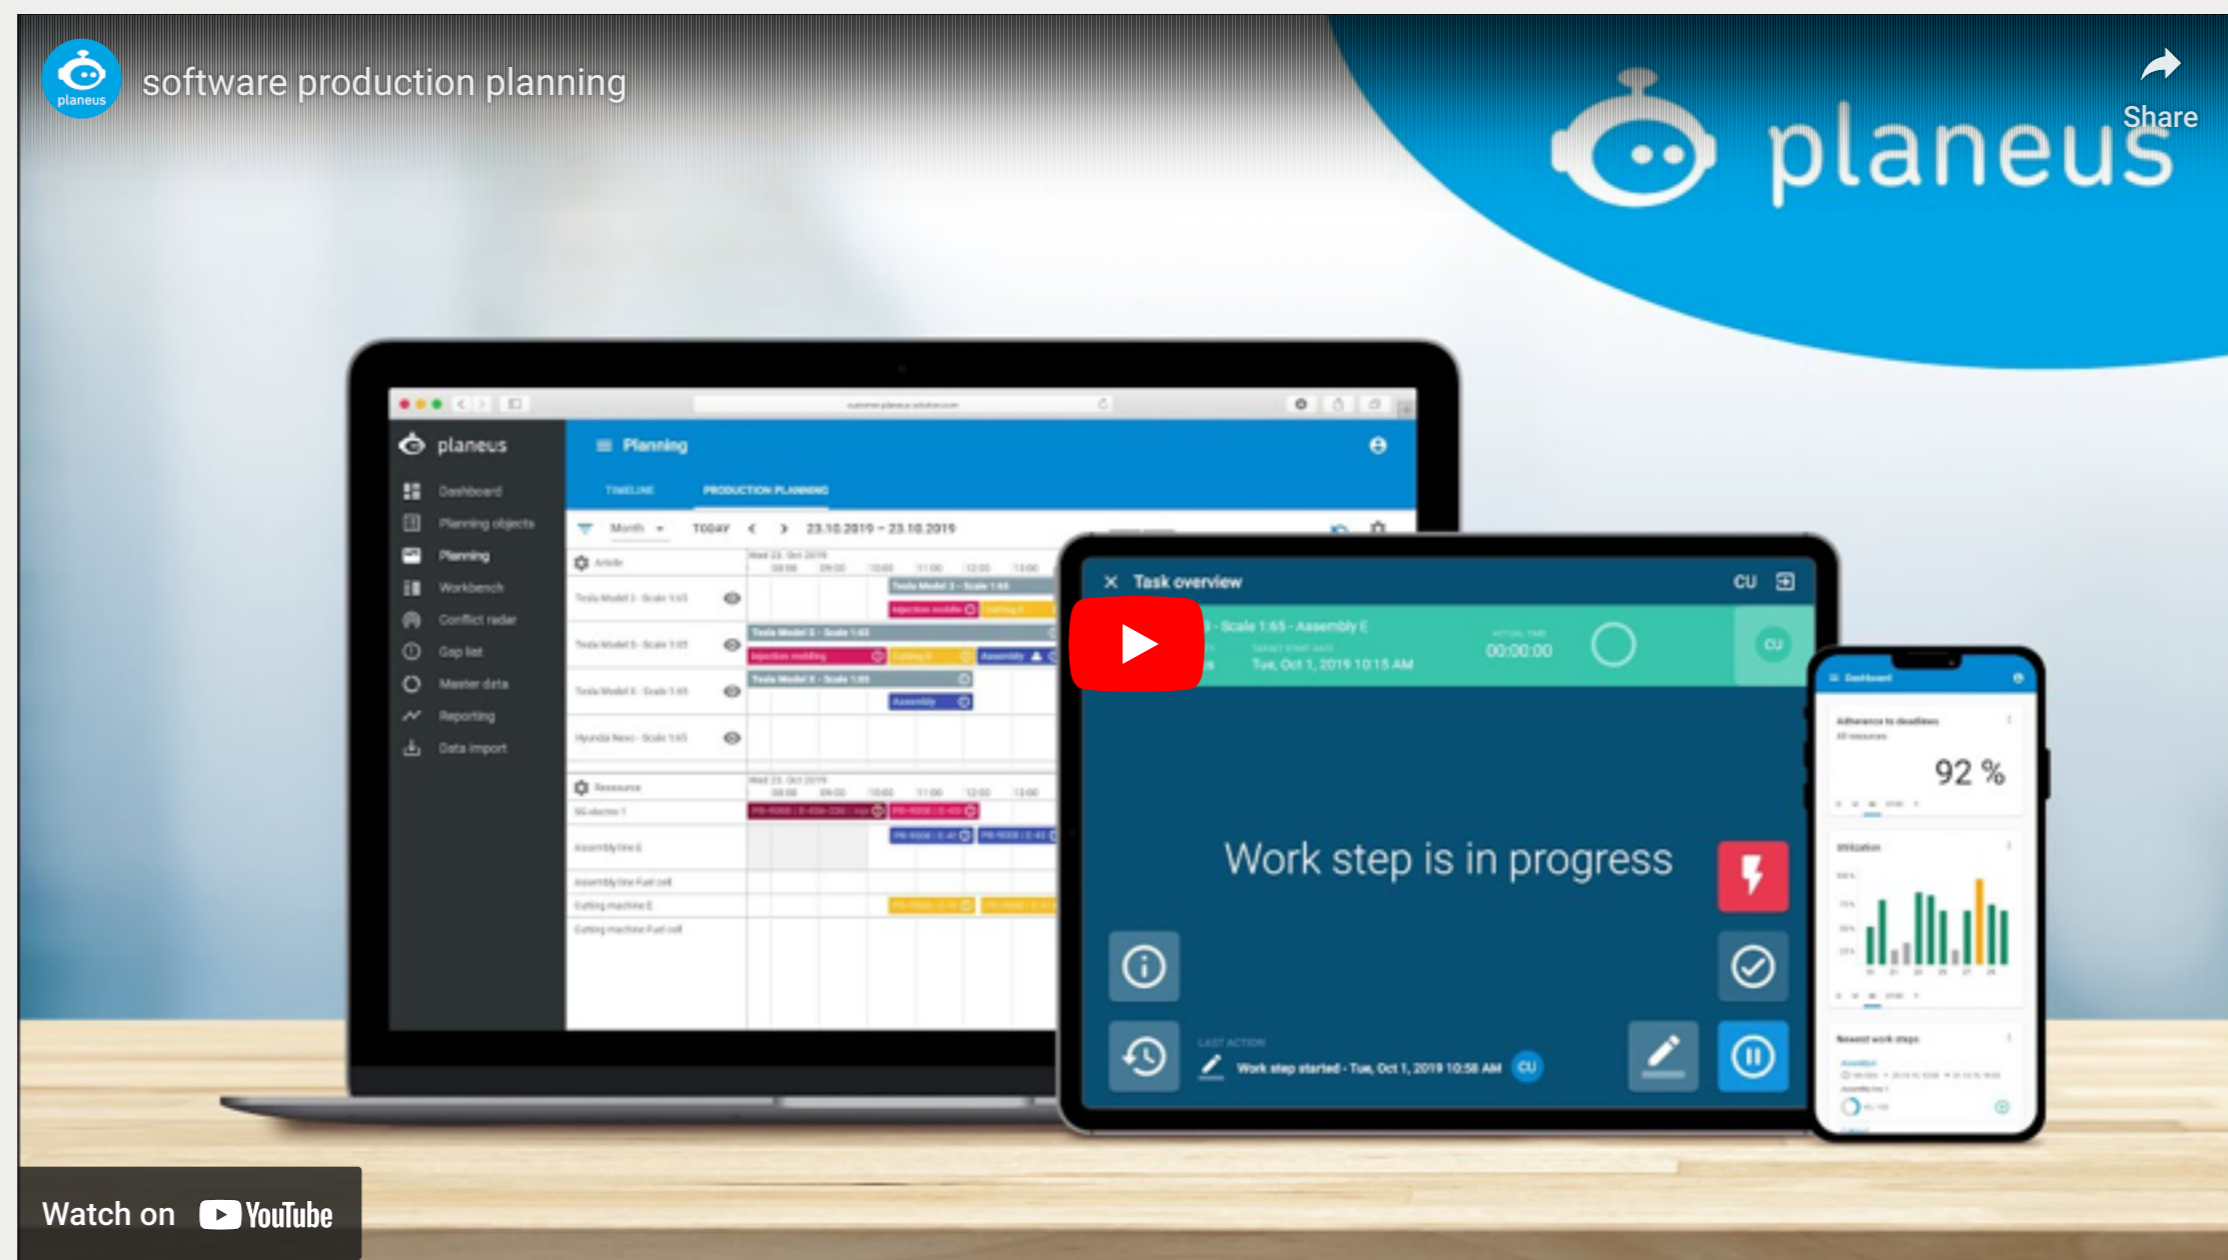

planeus is used in Germany by notable companies such as BMW Group, Engionic and Deinzer Metals and has a proven and solid pedigree in delivering a smart planning solution.

Get rid of mind-boggling Excel spreadsheets and decades old software. Visualise your manufacturing processes, optimise production plans and adapt to situations in real time. planeus will also link to cloud based inventory systems, such as Unleashed Software. Now that is powerful.

If you want to improve your planning and scheduling and link your process machines back to a smart gantt chart, which will even tell you where the current and future conflicts are, then please contact Langcroft Consultancy for further information. **CLICK HERE TO GET A FREE TRIAL**
