

# iMaintain

1000 Engineers in Your Pocket

# iMaint

1000 ENGINEERS IN Y

# 1000 Engineers in your pocket Changing how manufacturing uses AI Forever.

iMaintain transforms how manufacturers access and use their operational knowledge.

Instead of replacing existing systems, iMaintain acts as an **AI-powered layer** that plugs directly into a company's CMMS, ERP, inventory, and document libraries. It centralises critical data — from asset manuals and safety documents to spares and historic work orders — and makes it instantly accessible through natural language queries and role-based dashboards.

Think of it as having the **knowledge of your entire maintenance team at your fingertips**, with AI answering everything from *"What does alarm code X mean?"* to *"Which technician completed the most work orders last quarter?"*

Operating as a **B2B SaaS**, iMaintain is helping SMEs modernise with a lean CMMS while giving larger enterprises the ability to supercharge their existing systems.

With **SEIS advanced assurance**, iMaintain is seeking strategic partners and pilot customers to drive product development and scale across the manufacturing sector.

## Industry Problems

### Costly Downtime

Machine breakdowns can cost up to **£240k** per hour.

### Knowledge Access

Critical knowledge is **not accessible** quickly, AI is uniquely positioned to solve this

### Unstructured Data

Manufacturers have unstructured knowledge everywhere from paper to Excel and other **legacy** systems

## How it works

### Simple accesability

Anyone can access the knowledge they need, from machine manuals, safety information and previous engineers knowledge.

### Seemless transition

By using API connectors for ERP, CMMS, Inventory systems and file structure. All the data is there, ready to use.

### Record tribal knowledge

With simple tagging, checkboxes and text input, engineers record every fix with ease. Also uploading manuals and procedure to assets.

## Product Benefits

### Reduce downtime through smarter, faster task resolution

Our AI-powered platform helps identify and resolve issues quickly, minimizing costly production interruptions.

### Maximize compliance

AI lets you know when documents are out of date and the numbers do not match. Keeping you ahead of the compliance curve and avoiding fines.

### Real-time analytics drive accountability and efficiency

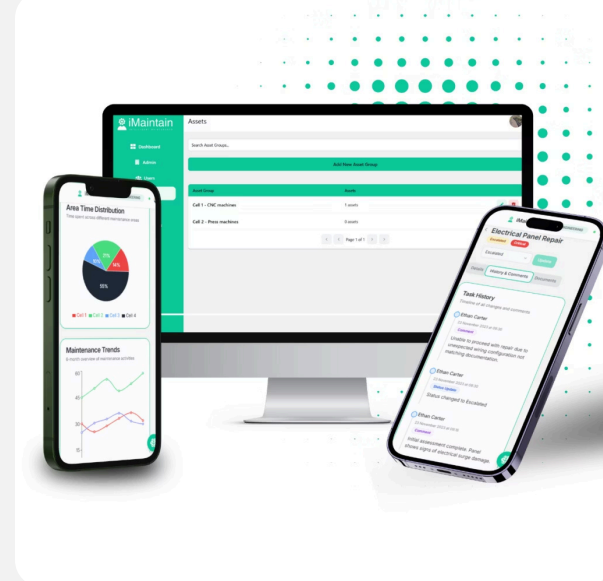

Make data-driven decisions with comprehensive insights into maintenance performance and equipment health.

## Key Product Features

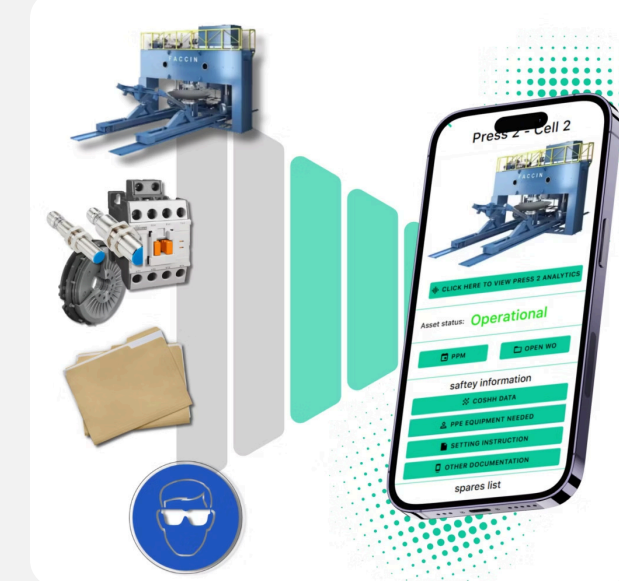

### iMaintain Brain

The first ever AI engineer assistant, trained on your site's data for real-time knowledge delivered to everyone from shop floor, right the way to C-suit.

### Asset Forecasts

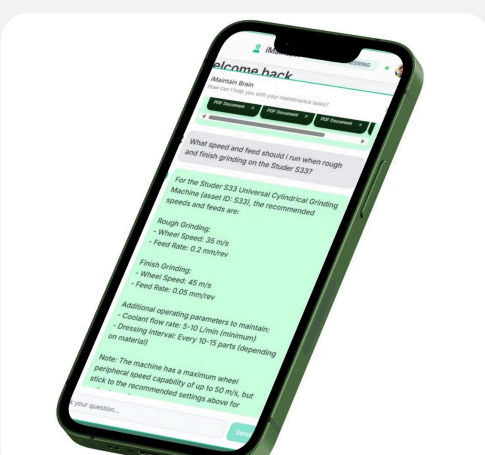

AI tracks years of asset history, Showing you...  
  
Downtime cost impact.  
  
Inventory consumption forecasts.  
  
Technician performance.

### Asset Hub

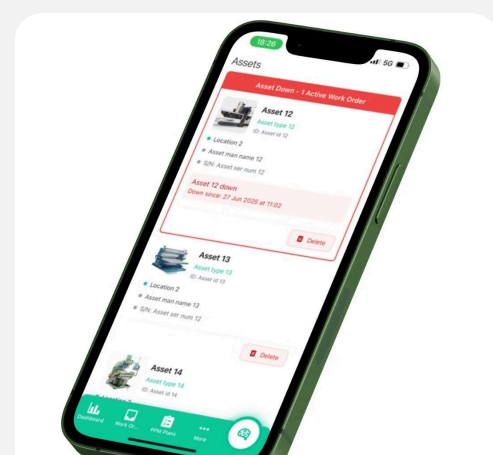

Centralised manuals, spares, and preventative maintenance schedules all in one place.

## AI Features

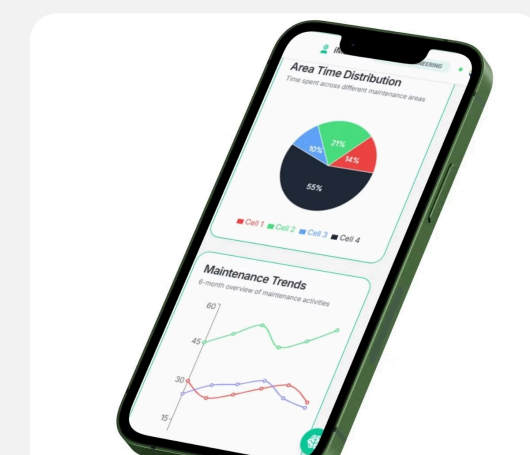

### iMaintain Brain chatbot

From senior to unseasoned, ask iMaintain brain any question. AI will search through your company data to provide instant answers right at your fingertips.

### Inventory Consumption forecast

AI looks through your asset history, giving you information on consumption, to help you always hold the right inventory.

### Kaizen Opportunity

iMaintain analyses time spend, spare consumption and breakdown occurrences to recommend ways to improve uptime.

## Launch Market

### UK based Manufacture's

Medium manufacturing companies with in-house teams 50-150 employees. Quick to adopt and implement.

### 29 Capture

Capturing 29 clients in the UK by the end of year one to show commercial traction. iMaintain already has 7 LOI, waiting for launch

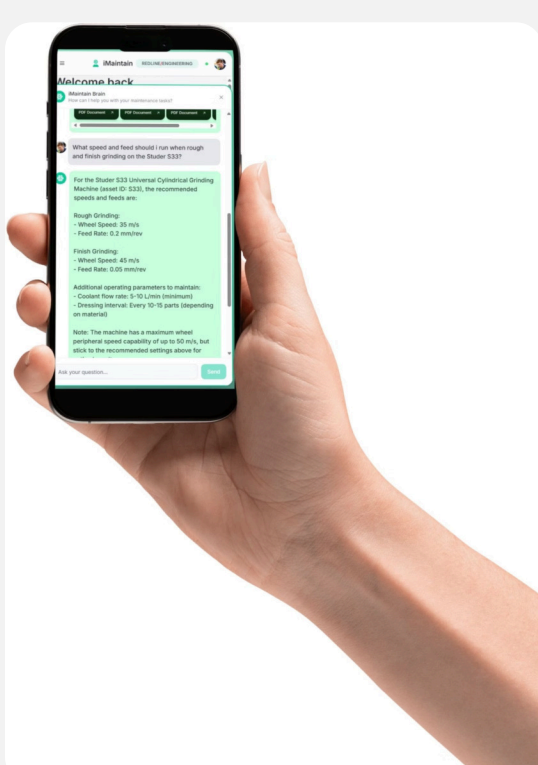

## Demo Available

See iMaintain in action with our available demonstrations:

- MVP and POC build available on request

## Meet the Founders

### Adam - The Boots

A former engineer and CI lead with hands-on manufacturing experience.

He founded iMaintain to modernise manufacturing, and enable the shop floor to act quickly, always having the right knowledge.

### Hannah - The Money

A finance expert, working in manufacturing finance and seeing how poor maintenance can impact company profit.

Hannah founded iMaintain to centralise teams and eliminate company waste.
