

AI TRAINING & ENABLEMENT

From curious to capable in a day

Hands-on AI training from people who build AI systems for a living. We have been doing this for over 15 years. No jargon, no death by PowerPoint: practical skills your team will use from day one.

● IN-PERSON AT YOUR PREMISES

● VIRTUAL VIA ZOOM / TEAMS

● UP TO 20 PER SESSION

THE CHALLENGE

AI is transforming every industry. Is your team keeping up?

Most teams are curious about AI, unsure where to begin, and short on time to figure it out. The patterns we see again and again:

01

Your team is curious about AI but doesn't know where to start

02

Two people on the team get it, though everyone else is watching from the sidelines

03

Your team tried AI, got a poor result, and wrote it off

04

Your competitors are already using AI to move faster

WHY US

Our courses are built by AI practitioners

Most AI training is delivered by people who discovered ChatGPT last year. Ours is delivered by data scientists and engineers who have spent more than 15 years building machine learning systems, deploying AI at scale, and advising businesses on what works. We build autonomous workflows, knowledge assistants, and AI strategy for our clients every day, and that experience shapes every session we run.

HOW IT WORKS

01

Discovery call

A free conversation about your team, tools, and goals.

02

Tailored programme

We interview team leads, review your existing tools and workflows, and build custom exercises and industry case studies.

03

Delivery day

In-person or virtual. Interactive and hands-on throughout, never lecture-style.

04

Ongoing support

Post-session resources, email support, and coaching calls depending on programme.

Three programmes, every stage of your AI journey

Each programme is tailored to your organisation before delivery. The natural pathway runs from Ignite into Accelerate; Vibe Coding suits any team ready to build.

Ignite / AI Essentials for Your Team

HALF-DAY WORKSHOP · 3.5 HOURS · UP TO 20 PARTICIPANTS · 30-DAY EMAIL SUPPORT

Best for: teams new to AI who need a practical, low-commitment starting point.

- / Understand what generative AI can and can't do
- / Cut routine drafting time by using AI as a first-pass writer for emails, reports, and briefs
- / Spot the quick wins in your own role, and avoid costly mistakes around data privacy
- / Walk out using AI tools productively on the same day

Accelerate / AI Power Skills for Your Department

MOST POPULAR

FULL-DAY WORKSHOP · 7 HOURS, MODULAR · UP TO 20 PARTICIPANTS · 60-DAY SUPPORT AND CHECK-IN CALL

Best for: departments ready to embed AI into daily workflows and boost productivity.

- / Turn repeat prompts into shareable, reusable assets for your whole team
- / Know when to use an assistant, a workflow, or an agent, and build each with confidence
- / Design and deploy a workflow that runs on its own, and diagnose it when it goes wrong
- / Handle data privacy and governance calls without waiting for Legal or IT
- / Leave with a signed 30/60/90 adoption plan already in motion

Vibe Coding / AI Building for Non-Coders

FULL-DAY WORKSHOP · 7 HOURS · UP TO 20 PARTICIPANTS · 30-DAY EMAIL SUPPORT

Best for: non-coders who want to build working tools by directing an AI agent, with the judgement to keep them safe.

- / Direct an AI coding agent to build a working tool from a plain-language brief
- / Read and judge a proposed change before accepting it, instead of trusting it blindly
- / Use git as an undo button, so a bad agent run costs you nothing
- / Recognise the common pitfalls: exposed secrets, made-up functions, the last-mile problem
- / Decide whether a build is a personal tool, shareable with caveats, or needs a developer

A modular catalogue, assembled around your team

Accelerate is built from standalone modules across four tracks. Each module runs on its own, so a programme can be assembled for one department or a mixed cohort, from a single day to a multi-day intensive.

TRACK 01

Foundations

Eleven modules taught without code: what an agent is, context design, cost sanity checks, test suites, connectors, workflow drift, and a hands-on build on your own stack.

TRACK 02

Strategy & Leadership

A facilitated workshop for deciding where AI investment should land first: which tasks, in what order, and who owns each step.

TRACK 03

Governance & Compliance

Practical judgement calls on data and tools, a governance operating model, and an EU AI Act introduction covering the literacy duty that lands on almost every team.

TRACK 04

Technical & Builder

Six code-based modules with a provided API environment: tool-using assistants, agents, MCP servers, retrieval (RAG), eval harnesses, and multi-agent teams.

Featured module: AI Opportunity Workshop

Our AI Opportunity Workshop helps you identify where AI can deliver the greatest value for your business. Together, we'll explore practical use cases tailored to your organisation, assess each one based on business value, feasibility, and risk, and prioritise the opportunities that are most likely to succeed. You'll leave with a clear, actionable roadmap that helps you invest in AI with confidence, focusing on initiatives that deliver real business impact rather than chasing the latest trends.

EXAMPLE ASSEMBLIES

Department foundations	1 DAY
Leadership and strategy	1 DAY
Agent and connector intensive	1.5 TO 2 DAYS
Technical builders	2 DAYS
Mixed cohort (splits technical / non-technical on day two)	2 DAYS
Regulated industry	2 TO 3 DAYS

PRACTICAL DETAILS

Tools: free ChatGPT and Claude accounts are enough to take part. Copilot or Gemini sessions use your existing licences.

Larger groups: more than 20 people run as additional cohorts at a reduced rate, with multi-cohort and enterprise pricing available.

Mixed experience: sessions are designed for groups with varied AI experience, from sceptics to enthusiasts.

Availability: we take on a limited number of engagements each month. Current lead time is roughly 2 to 3 weeks.

Ready to make your team AI-confident?

Every programme starts with a free discovery call: your team, your tools, your goals.
