

REDBRIDGE
DIGITAL

Capability Overview

Who We Are

Redbridge Digital is a specialist consultancy helping engineering businesses navigate the digital landscape. We work closely with companies in offshore energy, defence, and complex equipment manufacturing to modernise their engineering operations through automation, software, and strategic digital tools.

Our Offer

We support clients at every stage of their digital journey:

- **Engineering Software Development**
Bespoke tools and software tailored to your engineering workflows, enhancing speed, accuracy, and usability across disciplines.
- **Digital Strategy & Transformation**
We help you define and deliver a practical, business-aligned roadmap — from assessing digital maturity to deploying automation and AI across your teams.
- **Legacy Software Maintenance & Adoption**
We can diagnose, fix, document or even take ownership of aging but business-critical engineering tools — maintaining, supporting, and modernising them as needed, while ensuring continuity and knowledge retention.
- **Resource Augmentation**
Access skilled, engineers and developers who integrate seamlessly with your teams to deliver tools, software or project management.

What Makes Us Different

Bridging Engineering & Software

We combine engineering domain knowledge with cutting-edge digital expertise — enabling us to solve real problems, not just deliver code.

Outcome-Focused Delivery

Every engagement is grounded in your business goals — whether that's reducing time-to-decision, unlocking data, or increasing engineering throughput.

Proven, Practical Expertise

With over a decade of experience applying automation and digital tools across high-integrity industries, we bring insight, not overhead.

Let's Talk

If you're ready to simplify complexity, modernise your tools, and futureproof your engineering capability — let's start the conversation.
