

## CPMS: THE REASON OF EXISTENCE

Over 30 years of experience as an independent solutions provider and systems integrator working with many large multinational clients within the manufacturing sector, has enabled us to gain significant insights into the increasing challenges manufacturers are facing and the solutions they require to meet them. Today, manufacturers are trying to cope with the high demand of customer market initiatives requiring production facilities to adapt immediately. This leads to new technologies and constantly changing production requirements to cope with the market demands. The strategy of using a dedicated software product (technology) is at risk due to inflexibility and reaction time to market changes. This is one of the main reasons why Contec developed our production management solution (CPMS). CPMS is a light weight framework fully compatible with industrial standards allowing us to modify production processes immediately, connect any equipment or legacy system and integrate new technologies on the spot. We also see it as a commitment within our own company to invest in standards that allow us to serve our customers in the best way possible. CPMS is integrated within our standard integration services to deliver a high quality and standardised solution to our customers.

## CPMS CORE MODULES

CPMS is fully based on the ISA-95 data model. The framework comes standard with a workflow engine. Contec has created standard add-on modules that can be plugged in with ease to create direct return.

The framework can integrate customer specific requirements on the spot making CPMS the perfect integration strategy to lead your factory to new dimensions.

### WE MAINLY FOCUS ON:

- ✓ **Helping our customers achieve value from adopting emerging digital solutions and technologies**
- ✓ **Create a single user interface on the shop floor**
- ✓ **Direct visibility about all work processes on the shop floor**
- ✓ **Integrate high level operation flexibilities**

## MARKETS WE SERVE

- Consumer Packaged Goods
- Food and Beverage
- Tank Terminals
- Discrete Manufacturing
- Life Sciences
- Internal Logistics

## INTEGRATION CONSULTANCY SUPPORT

Our highly skilled production architects can help you in enabling you to begin on your journey towards joining a new generation of smart agile manufacturing organisations. . Our company is constantly involved in the latest integration technologies and production processes. After screening we can supply required recommendations, action plans and support.
