

# How Our Solutions Tackle Your Business Challenges

Enterprise Management — mapped against Quality Management, Production Planning & Control, and Business Operations.

1

## Quality management

CARCASE · BLACK BOX · WEIGH SCALES · OCM

Our kill-line and traceability system (CARCASE) and carcass data capture hardware (Black Box) record quality and compliance data at every stage of production. Combined with precision weigh scales and automated case marking, you get full batch traceability, lower recall risk, and QA teams that are audit-ready every day.

2

## Production planning and control

FOPS8 · FORMIX

FOPS8, our Factory Order Processing System, schedules production against real orders and demand, while FORMIX keeps recipe and formulation accuracy tight on the line. Together they give your operations team live visibility and control over what's being made, when, and to what spec.

3

## Business operations

TOUCH SCREEN TERMINALS · RF SCANNERS · LABEL PRINTERS

Our hardware and software work as one connected system: touch screen terminals, RF scanners and label printers feed data straight into order processing and reporting. That links your shop floor to the back office, cuts manual admin, and gives management accurate, real-time operational data.

## See it in action on your line

Talk to our team about a live demo of CARCASE, FOPS8, FORMIX and our data capture hardware, built around your process.
