

Digitalize production.

Elevate efficiency.

Evocon is a visual and user-friendly OEE software that helps manufacturing companies improve productivity and reduce waste as they become better.

Shift View

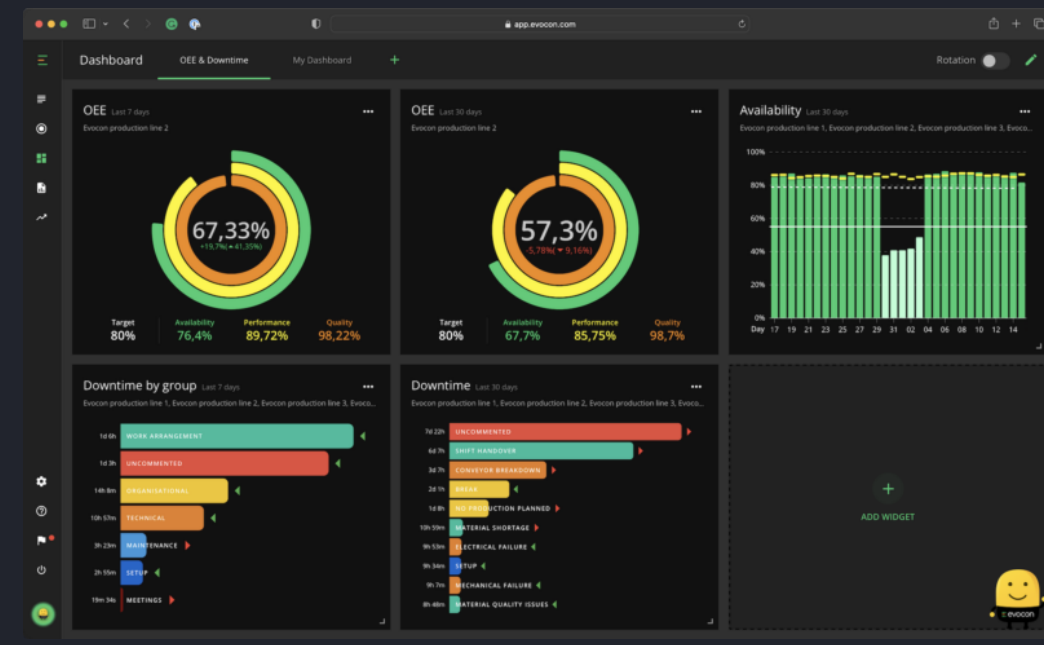

Monitor production & shifts in real-time

Shift View helps you track and analyze all of your production shifts across different dates, stations, factories, and countries. It gives an hour-by-hour overview of what has happened (downtime, speed, quality) and helps you assess the efficiency of your shifts.

Dashboard

Empower teams with an OEE Dashboard

OEE Dashboard provides the means to visualize production data and helps monitor production performance in real time and on the go. Use it to upgrade your daily and weekly monitoring process and understand whether things are progressing in the direction you want.

Factory Overview

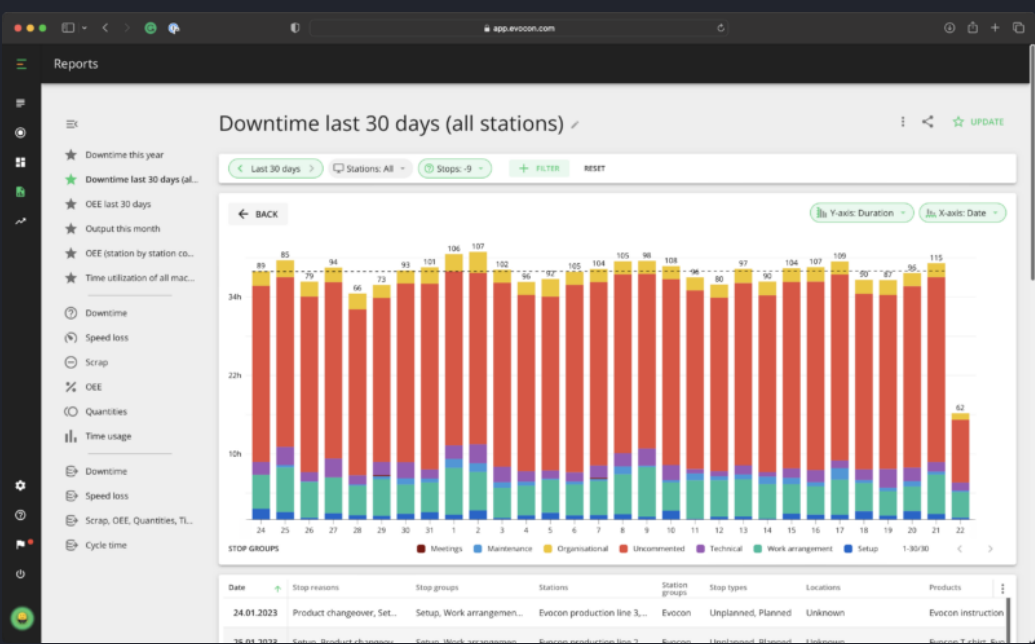

Measure the heartbeat of your factory

With Factory Overview, you make the status of all your machines visible to everyone. This gives your team the transparency they need to manage the factory in real-time and allows them to react to any issues quickly. No more unpleasant surprises.

Reports

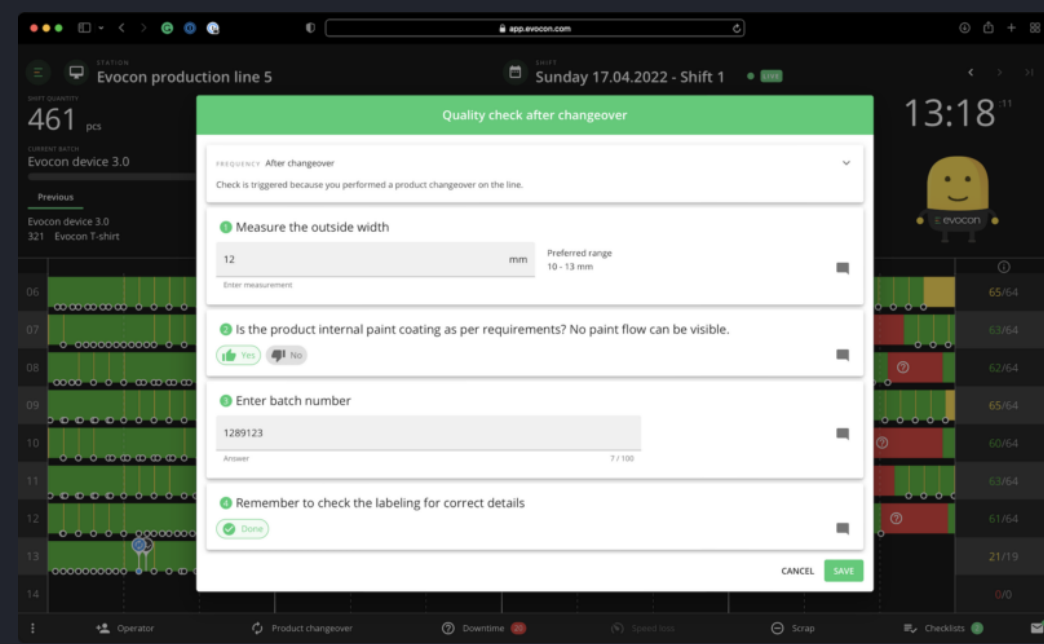

Analyze data & increase efficiency

Evocon provides manufacturers with the most impactful production reports and features in order to take action, achieve goals and increase production efficiency. Different reports offer transparency about essential areas, so you know exactly what is going on and why.

Checklists

Improve quality & reliability

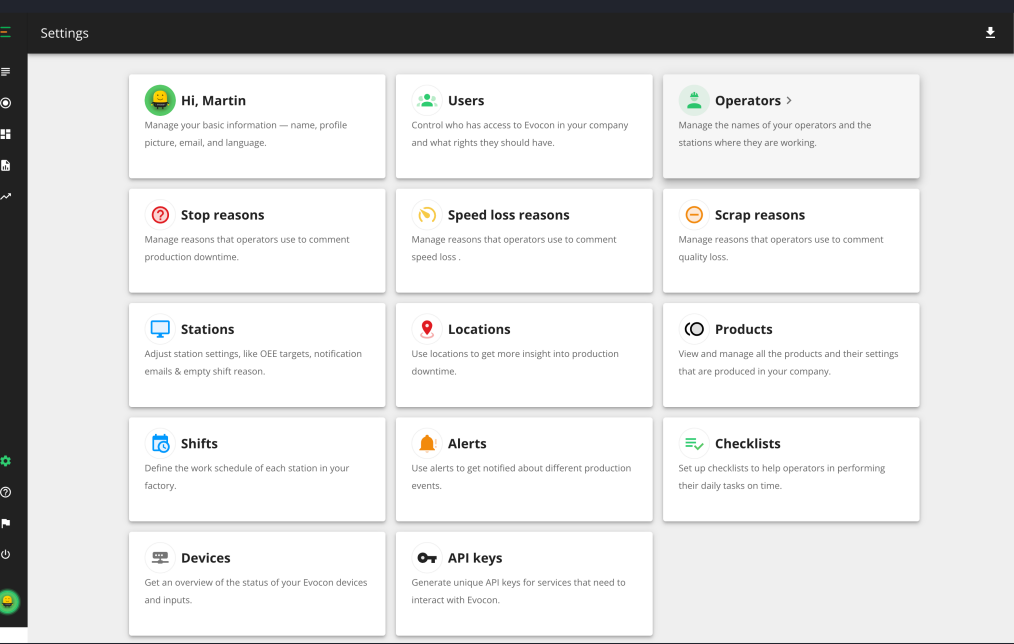

With Checklists*, you can digitize and automate all of your recurring quality and maintenance checks. By utilizing real-time data from machines you enable operators to do relevant checks and tasks at the right time, resulting in the reduction of waste and improvement in quality.

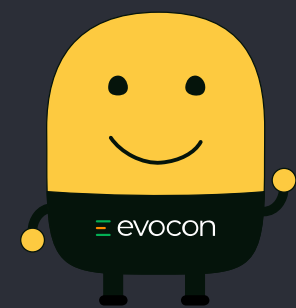

*Additional fee of 59€/month, per machine

Settings

Manage your data with ease

Managing all your production data (downtime reasons, shifts, operators, users, products, etc.) is made simple and user-friendly so that anyone in your company can do it.

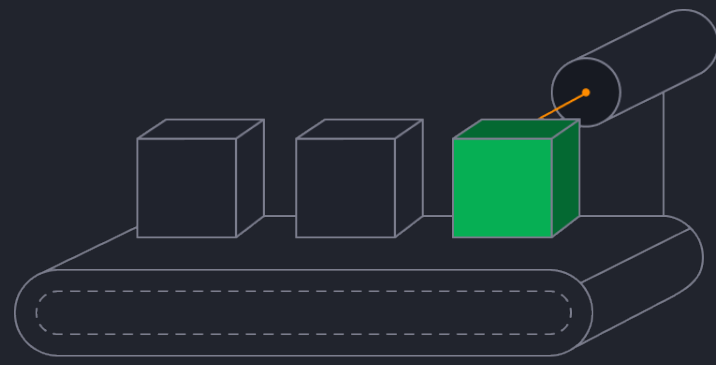

Start your improvement journey with Evocon's 30 day free trial

All manufactures can try Evocon for free for 30 days with full functionality and with a plan that sets you up for success.

Getting started with Evocon's OEE software is as easy as 1-2-3.

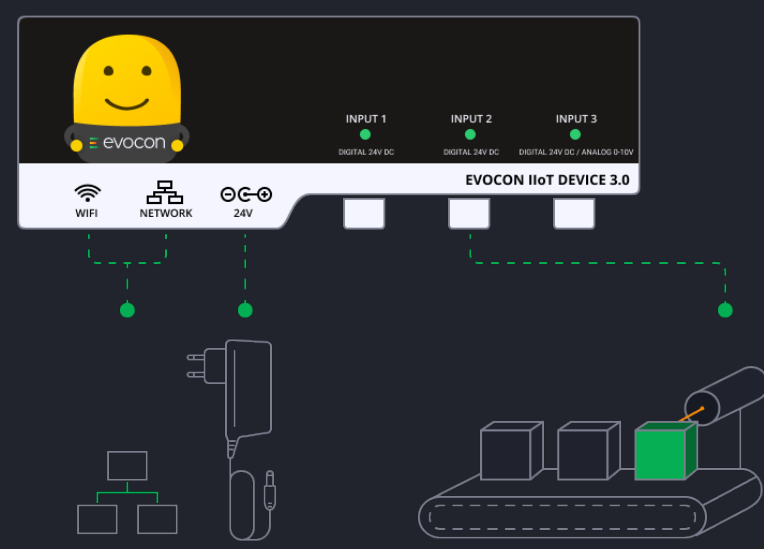

1. Install

Sensor is placed to detect products on a production line or machine and connected to Evocon's IIoT device.

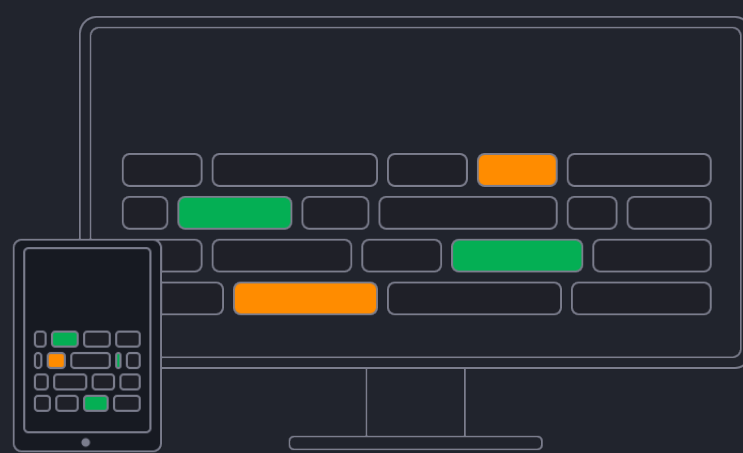

2. Connect

The device is connected to the Internet which sends collected data to Evocon's OEE software for analysis.

3. Visualize

Collected data is displayed on the shop floor where operators can use it to defeat inefficiency.

Setting up Evocon in your factory is a plug 'n' play process that can be done by anyone in your company.
