

## Industrial digital technology for the vehicle build workshop.

Xspect replaces paper, spreadsheets and photos with a single configurable platform that maps the build, captures inspection data, manages non conformances, and produces audit ready compliance evidence on demand.

Vehicle manufacturers and converters have always run build inspection, quality control and compliance on paper, spreadsheets and loose photographs. It is slow, hard to audit, and easy to lose. Xspect turns that everyday workshop activity into structured, searchable digital records, giving quality teams evidence on demand, giving managers real time visibility, and reducing the manual admin that holds production back. The platform is highly configurable, quick to deploy, and built to be used by shop floor teams from day one.

### WHAT THE PLATFORM DOES

#### Build inspection

Maps each stage of a vehicle build from start to finish, capturing inspection results, sign offs and photographic evidence against a configurable workflow.

#### Non conformance management

Turns a defect or issue into a tracked non conformance, with root cause, corrective action and proof of resolution, all recorded in line.

#### CoP readiness

Maps live build activity against the Conformity of Production clauses, giving a red, amber, green readiness view and an on demand evidence pack for audit.

#### Structured compliance evidence

Stores quality manuals, control plans and records in one versioned evidence layer, replacing folders, spreadsheets and containers full of paper.

### INTELLIGENCE BUILT IN

Xspect applies computer vision and machine learning to inspection data that has always lived on paper and in photographs, structuring it automatically and surfacing quality issues and trends for the team to act on. This brings genuine digital intelligence to the shop floor without new hardware and without disrupting the existing build process.

### WHY MANUFACTURERS ADOPT IT

#### Low cost, low friction

A cloud platform with no new hardware required and no rip and replace of existing process.

#### Easy to use

Designed for shop floor teams from day one, not just compliance specialists.

#### Quick to deploy

Highly configurable to each manufacturer, so it fits the way the business already works.

### WHO IT IS FOR

Xspect serves vehicle manufacturers and converters of all sizes, from small family businesses moving off paper for the first time, to medium series builders maintaining type approvals and Conformity of Production. The inspection and quality layer is sector agnostic, so the same platform applies wherever a regulated or quality critical build process needs to be captured, controlled and evidenced.
