

You bought the AI. Your team **still isn't** using it.

Twisthand redesigns and implements the operations workflows where AI actually earns its keep — then leaves your people able to run them without us.

THE PROBLEM WE'RE CALLED IN TO FIX

Most manufacturers we speak to already hold the licences — Microsoft 365 Copilot, Google Gemini, Claude, ChatGPT Enterprise. What they don't have is a single workflow that runs differently because of them. Pilots stall, training fades, and the business case stays theoretical. The gap isn't awareness and it isn't tooling. It's that nobody has rebuilt the actual work.

WHERE AI PAYS IN A MANUFACTURING BUSINESS

- Quote preparation from RFQs, drawings and spec sheets
- Supplier and purchase-order document handling
- Spec, datasheet and standards lookup
- Production and planning meetings into tracked actions
- Compliance, audit and certification paperwork
- Customer enquiry and complaint response drafting
- Technical documentation and work-instruction updates
- PQQ and tender responses

HOW AN ENGAGEMENT RUNS

01 Diagnostic Days, not weeks. We sit with the teams, map where the hours actually go, and rank workflows by value and feasibility.	02 Working prototype Inside the first week. One real workflow rebuilt and running on your data, so the business case is observed rather than argued.	03 Implementation Into daily operations, with evaluation criteria agreed up front and a human in the loop wherever a decision matters.	04 Handover Documentation, training and the internal capability to extend it. We are designed to leave.
---	--	--	---

WHY WE'RE DIFFERENT FROM THE REST OF THIS DIRECTORY

Vendor-neutral We resell no licences and take no vendor commission. Copilot, Gemini, Claude — or none of them. Whatever fits the problem.	Transparent pricing Fixed-scope engagements from £2,950, published openly at twisthandai.co.uk . No day-rate drift, no discovery-phase surprises.	Senior practitioners only Founder-led delivery. No account managers, no juniors learning on your time, no 60-slide readouts.
---	---	--

GOVERNANCE & FUNDING

Governed by default Every build ships with agreed evaluation criteria, human-in-the-loop review at the points where a decision carries weight, and a documented data-protection position settled before any of your data is touched.	Funding routes Engagements may be eligible for Made Smarter Adoption support, and qualifying work can attract R&D tax relief. We'll help you frame and evidence the scope for either.
