

MADE SMARTER CHALLENGE · MANUFACTURING INFRASTRUCTURE

Intelligence on top of the systems you *already run*.

You're not short of data — it's trapped in exports, spreadsheets and job cards no one can act on. Talos turns what your batch & process operation already produces into operational intelligence, with no integration, no new hardware and no IT project. **The data layer the whole platform is built on.**

0 integration required

No connectors to build, no systems to replace, no migration. You export a file; the intelligence layer does the rest.

HOW IT SITS ON YOUR EXISTING STACK

01

Works with Sage, Access & Excel

Export your last 30–60 days of batch and purchase data in three clicks. If you can't export, we provide a simple template.

02

No installation, no IT team, no site visit

Nothing to deploy on your machines. Sent securely via an encrypted link — the whole handover takes minutes.

03

Automated, secure off-site pipeline

Your export is mapped, normalised and processed automatically — column headers matched to canonical fields, formats reconciled.

04

Legacy-friendly by design

Spreadsheets, ERP exports, paper job cards, email trails — mapped as they actually exist. We never demand clean data first.

05

Scales to the full platform

The same infrastructure powers Talos OS — real-time monitoring and multi-site rollups — with no new integration when you're ready.

We work with what you have. Nothing to rip out, nothing to migrate — an intelligence layer over your existing systems, not a replacement for them.
