

AI assurance for regulated environments

Independent assurance, governance and engineering for organisations where an AI system failing is a safety, compliance or reputational problem rather than an inconvenience. We make AI deployments defensible: to regulators, to auditors, to customers and to your own board.

THE CHALLENGE FOR MANUFACTURERS

AI is arriving on the shop floor and in the back office faster than the controls around it. Predictive maintenance, quality inspection, demand forecasting and document automation all carry the same questions:

- How do we know the model is doing what the vendor says?
- Who is accountable when it drifts, fails or is challenged by a customer or regulator?
- What evidence do we need for ISO, GxP, safety cases, insurers or grant funders?
- How do we adopt AI without creating a compliance liability we cannot see?

Most SMEs have no in-house governance function. We are that function, on demand.

WHAT WE DO

Fat Fish Digital is a London-based consultancy built for regulated sectors. Our core work is with NHS and healthtech organisations, with financial services and legal alongside. The same discipline applies directly to manufacturers with safety-critical or compliance-heavy operations.

Responsible by Design™

Our governance framework and the entry point to every engagement. It establishes accountability, risk classification, controls and evidence before anything is built or bought.

Assurance-to-Deployment (A2D™)

Our delivery methodology. It takes an AI system from assessment through validation, monitoring and controlled release, with the audit trail intact.

Engineering

When something needs building or fixing, our own engineers do it, inside the same governance envelope.

HOW AN ENGAGEMENT STARTS

1

Readiness assessment

A fixed-scope review of your AI systems, planned or live. You get a risk map, a gap list against the standards that apply to you, and a prioritised plan.

2

Governance in place

We stand up the controls, roles and evidence so adoption can proceed with the board and auditors comfortable.

3

Assured delivery

Where you build, buy or scale, we run A2D™ alongside your team or vendor so what goes live can be defended.

FUNDING AND GRANT SUPPORT

Alongside the technical work we support clients with grant applications, fundraising and R&D tax relief. If you are accessing Made Smarter or Innovate UK funding for an AI project, we can help shape the application so the governance and assurance work is funded from the start rather than bolted on afterwards.

Start with a conversation.
