

Smart Manufacture Intro

Smart Manufacture is an independent manufacturing consultancy and software services provider based in Bournemouth but with UK-wide coverage through its team of experienced manufacturing and ERP consultants.

Smart Manufacture specialises in driving growth and efficiency into small to medium sized businesses in the UK and Ireland, by helping them implement cost-effective, and user-friendly manufacturing software and business management systems in the cloud.

Smart Manufacture is an authorised consultant for MRPeasy, but also works with other ERP platforms, as well as having an in-depth knowledge of the wider marketplace for ERP software for the manufacturing SME sector.

Relating to MRPeasy consultancy, it works with manufacturers to help support their implementation of MRPeasy following an initial discovery and scoping consultancy, as well as with companies who have self-implemented the software but are looking for support with optimising the platform to add more value to their business.

As well as ERP software, Smart Manufacture also provides CRM and Digital Work Instruction software and ruggedised mobile devices for use on the shop floor and warehouses.

In addition, we have another side to our business, Smart Quality, where we offer ISO consultancy, and a range of ISO, Legal and HR & Health and Safety compliance management software.

Smart Manufacture brings 20 years of manufacturing and software expertise to your business; we are passionate about how we can help make an improvement to your bottom line.
