

Tascus

By Metis Automation

For Production That Flows

Build, check, and track every product.

Simply, digitally, and in real time.

Say goodbye to paper chaos and take
control of every step.

The Problem

Most manufacturers still rely on **paper, spreadsheets, and manual checks** to manage production.

It slows everything down, makes it hard to trace issues, and lets small mistakes turn into big problems.

If you've experienced rework, downtime, or constant firefighting on the shop floor, you know the frustration of trying to keep production on track.

The Digital Solution

A **Manufacturing Execution System (MES)** replaces paperwork with a **connected, guided process**.

Operators follow clear on-screen steps.

Quality checks happen automatically.

Data is recorded instantly and visible to everyone.

Every **product, part, and check is tracked**, giving you full control of what's happening as it happens.

With everything connected, your team works faster, makes better decisions, and keeps quality under control.

Check all aspects of the product

How It Helps

Challenge	Digital Solution	Outcome
Paper instructions	On-screen guidance	Fewer mistakes
Manual quality checks	Automatic verification	Higher quality
Disconnected data	Live dashboards	Instant visibility
Delayed reporting	Instant updates	Faster decisions

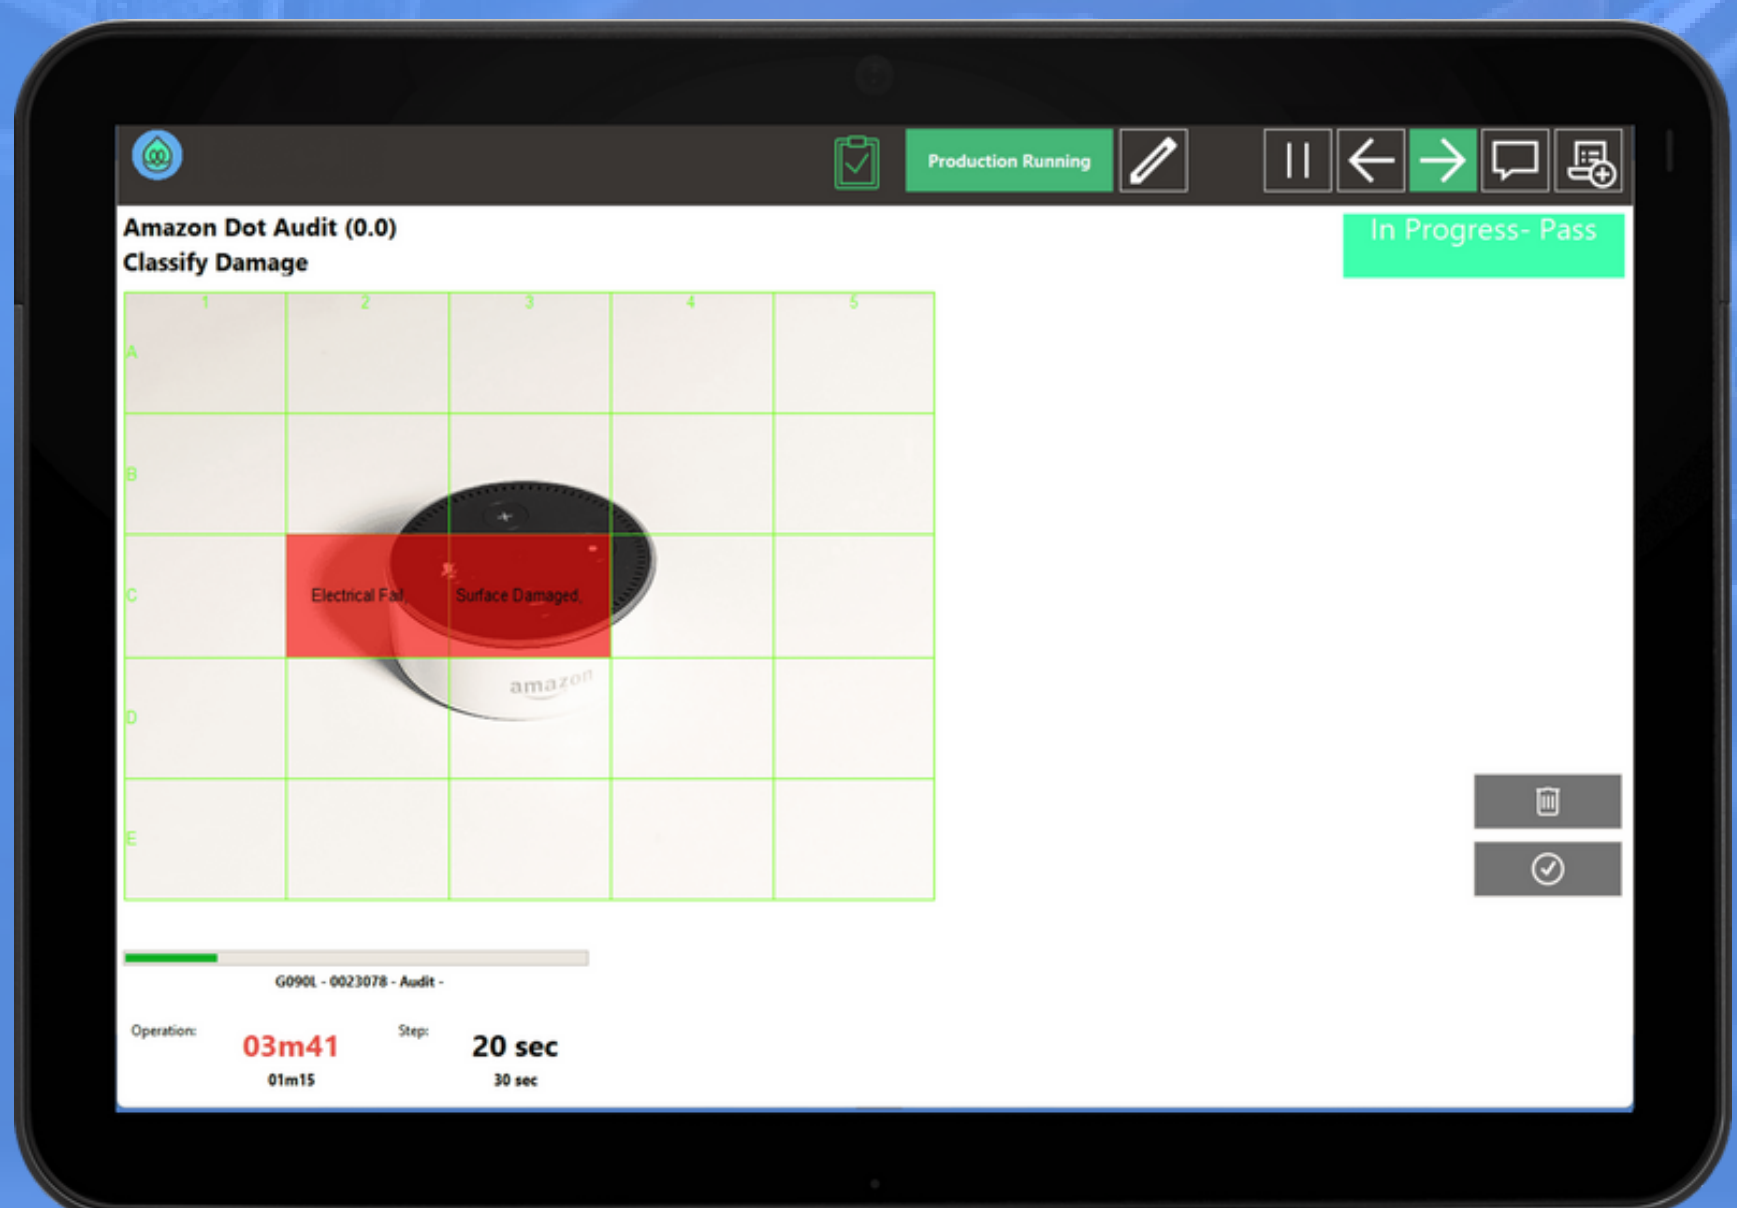

It's not just about going digital.
It's about **regaining control** of your process, your quality, and your time.

Why Tascus

Not all MES software fits real production.

Tascus was built by **engineers who've worked on the factory floor**, not just behind desks.

It's **fast to set up, easy to use**, and backed by a **UK team who care about your results**.

Tascus Key Differentiators:

- **Simple guided steps** help every operator get it right first time
- **Real-time quality tracking** you can rely on with every build
- **Automatic traceability** keeps every part recorded and easy to find
- **Clear production visibility** lets you catch issues before they cause downtime
- **Friendly UK support** from people who understand manufacturing

The Outcome

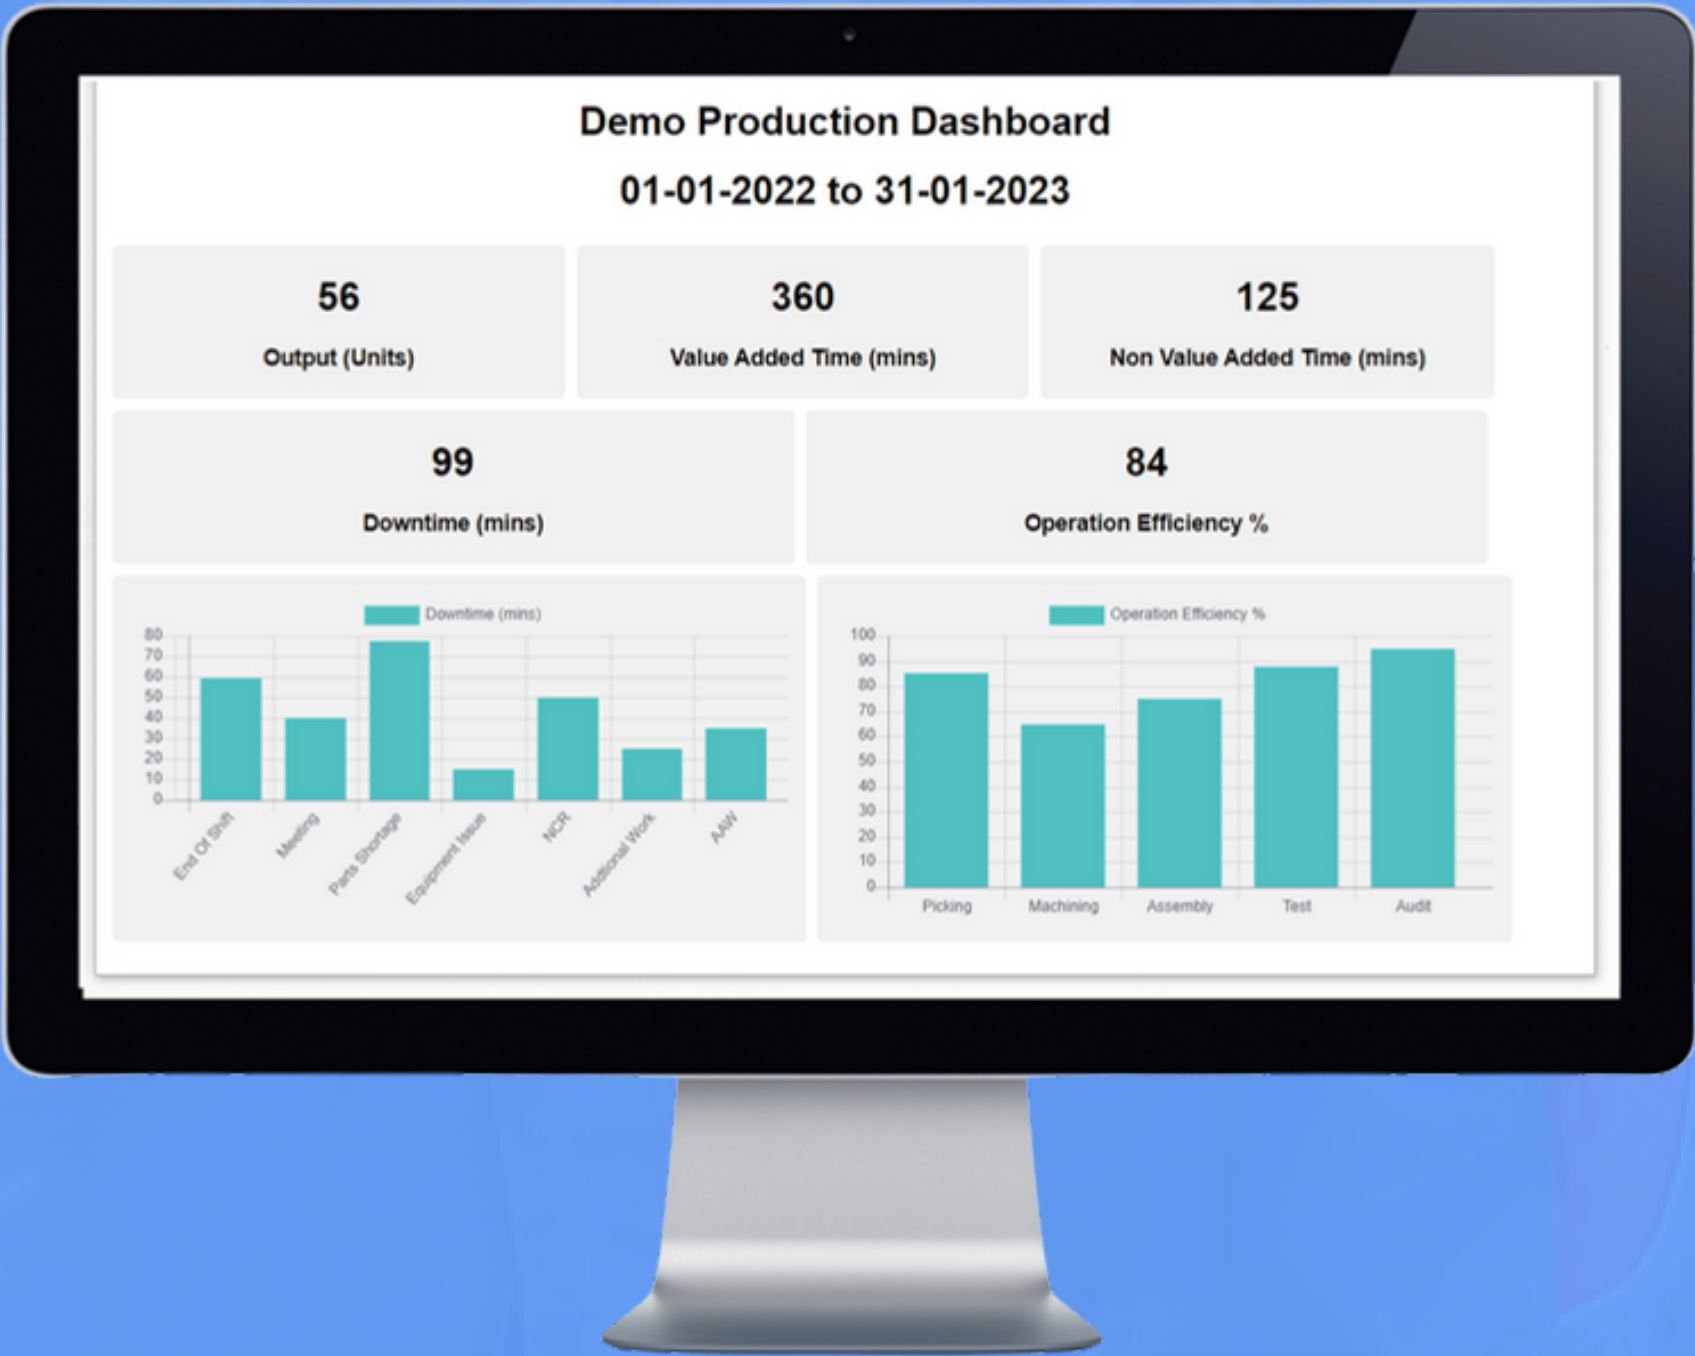

With Tascus, production just flows.

Clear steps.

Automatic checks.

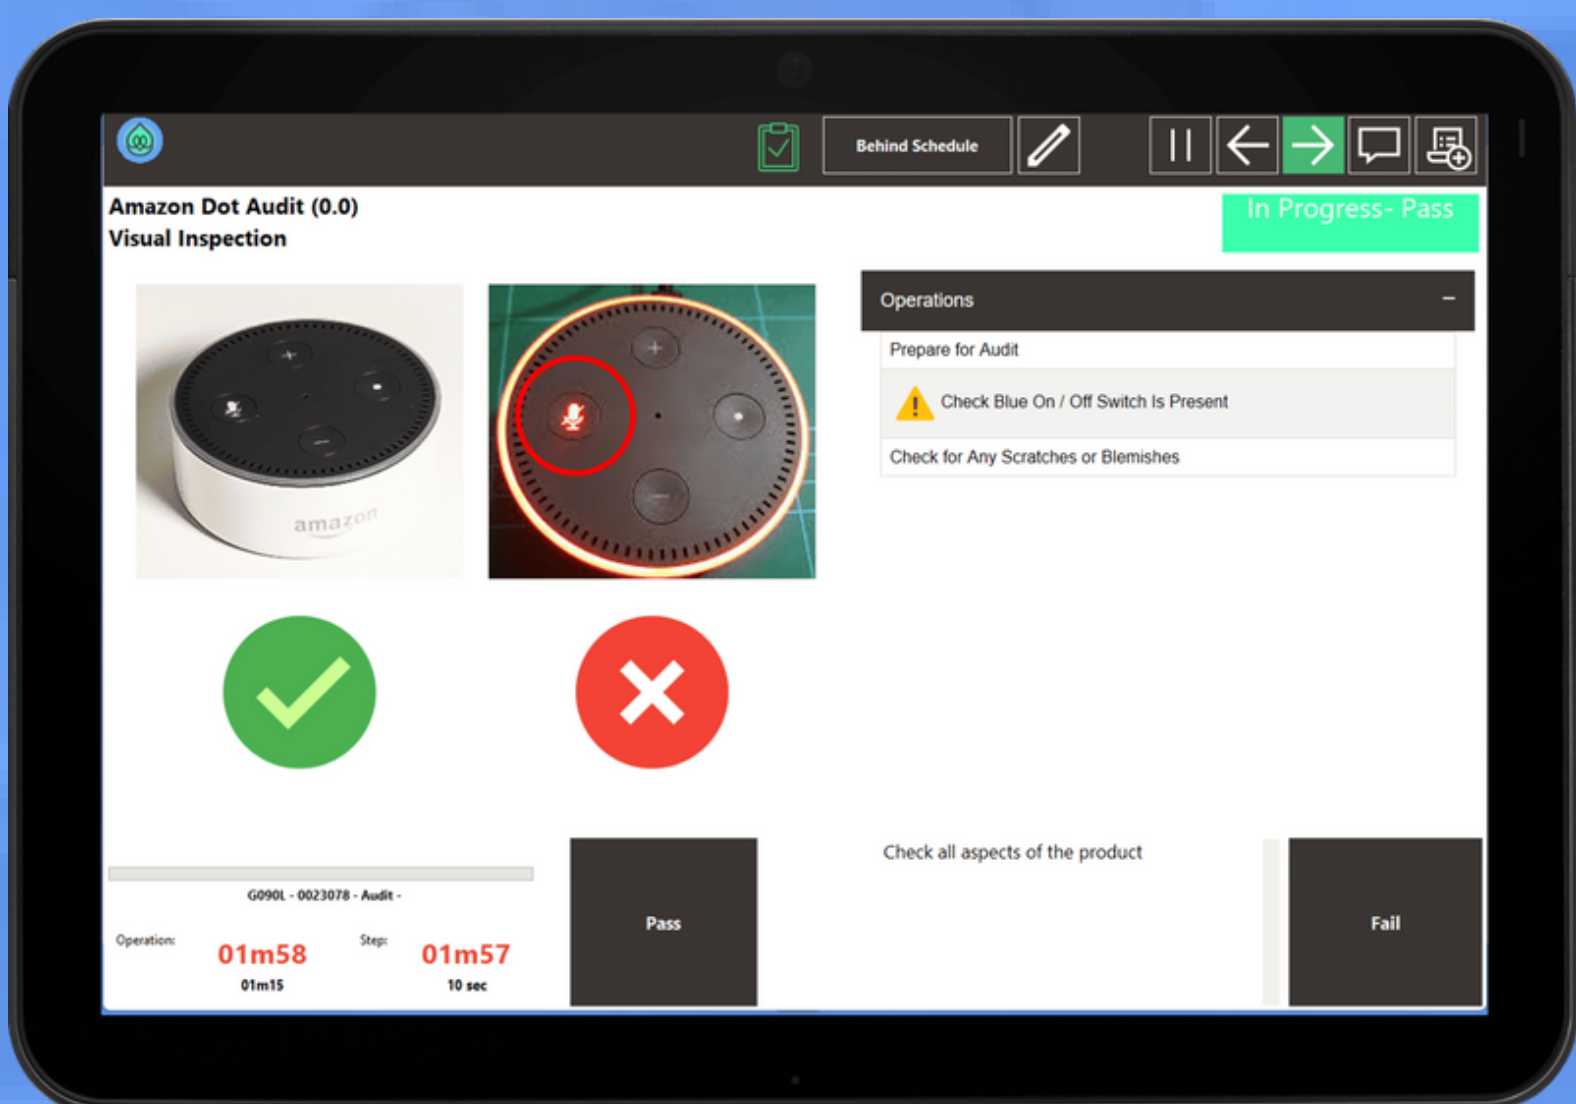

Live visibility.

Your team works confidently,
your quality stays consistent,
and your process just works.

See how Tascus helps your production flow.
