Microsoft Dynamics 365 Business Central (ERP)

An all-in-one business management solution designed to streamline and optimize manufacturing operations.

Business Central unifies and automates various business processes, providing a comprehensive platform for managing production, inventory, supply chain, sales, purchasing and financials..

Key modules for Manufacturers:

Supply Planning

Plan material needs according to demand to aid master production scheduling and material requirements planning.

Bill of Materials

Computing standard costs and crafting bills of materials becomes effortless.

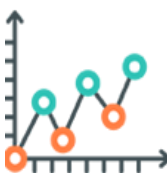

Version Management

Business Central simplifies tracking and monitoring versions of invoices, bills of materials, and routings.

Production Orders

Efficiently create and manage production orders and simultaneously post consumption and output details

Demand Forecasting

Plan and generate production and purchase orders by considering demand forecasts, available inventory levels and requirements planning parameters.

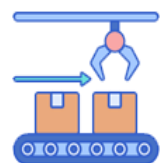

Capacity Planning

Capacity Planning Optimise manufacturing by adding capacities, setting up routings, and using them in production orders.

Machine Centres

The module allows extensive digital oversight of machine capacities.

Assembly Management

Manage raw materials, resources, and sellable items efficiently, simplifying inventory and item replenishment.
