

MADE SMARTER / TECHNOLOGY CAPABILITY

Connect the operation. Remove the spreadsheet hand-offs.

A platform-independent approach to connecting sales, purchasing, stock, production, quality, traceability and finance – delivered in controlled phases around the systems that already work.

**ONE CONNECTED OPERATIONAL FLOW**

Visible. Controlled. Ready to improve.

One operational picture, not six partial versions.

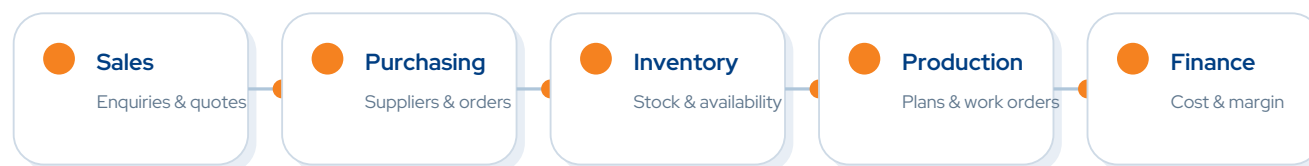

Connect the commercial, operational and financial flow so teams stop rebuilding the same information in different places.

THE CHALLENGE

Operational information is split across teams, spreadsheets and applications. Planning is slow, reporting is assembled manually and decision-makers cannot see the full order-to-cash position.

TARGET STATE

A trusted operational view

MANAGEMENT VISIBILITY LAYER

Shared dashboards / exceptions / priorities / audit trail / ownership

Workflow map

01

Current hand-offs and bottlenecks

Connected data model

02

Agreed records and ownership

Management dashboards

03

Timely operational visibility

Phased roadmap

04

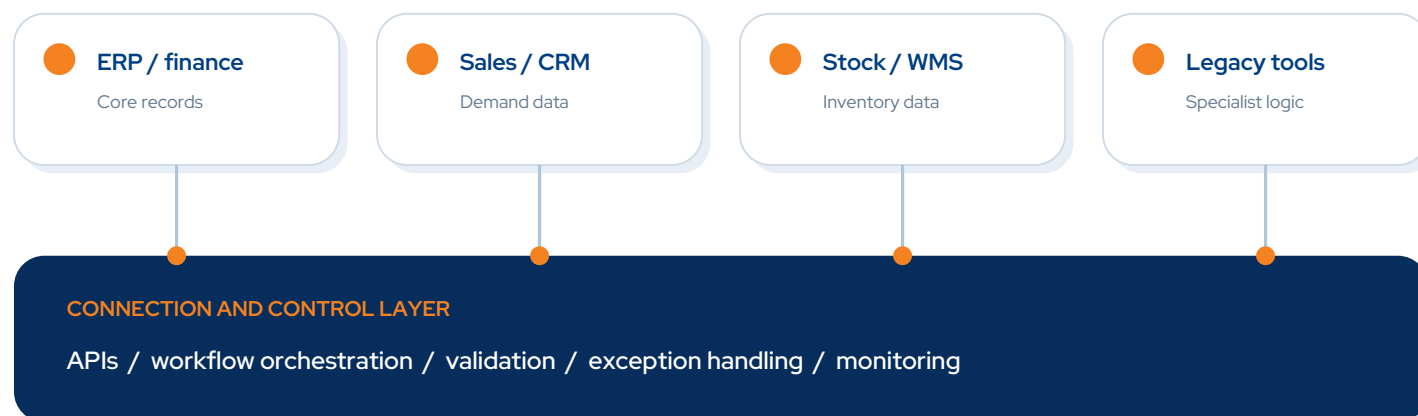

Priorities, effort and acceptance

Connect what works. Modernise what blocks the flow.

A controlled integration layer can remove duplicate entry and data gaps without forcing unnecessary replacement of working technology.

CURRENT ENVIRONMENT

CONNECTED OUTCOMES

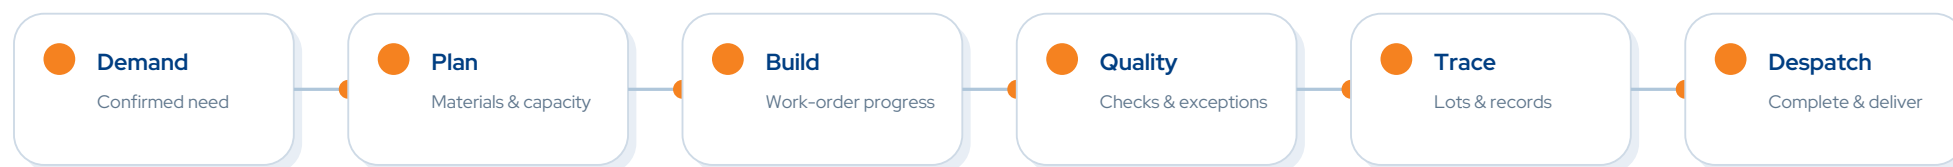

Supporting page: softomatesolutions.com/manufacturing-software-development/

Make the plan, the build and the record move together.

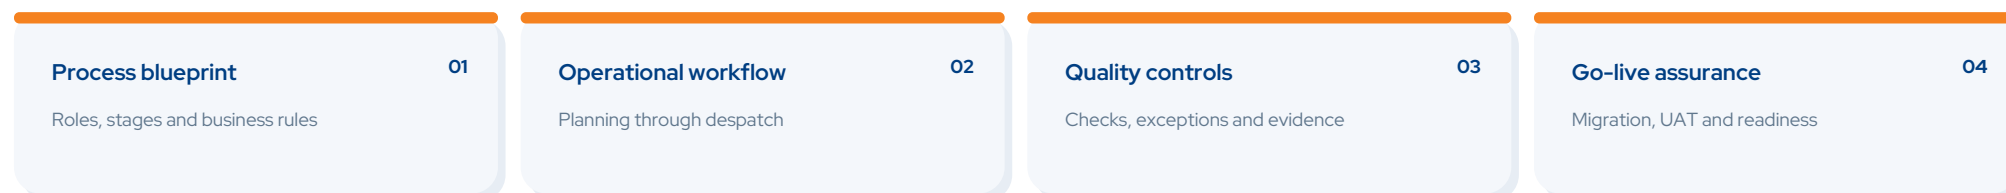

Connect production planning, work orders, material movement, quality and despatch so information follows the job – not a paper trail.

CONNECTED PRODUCTION FLOW

EXCEPTIONS BECOME VISIBLE AND OWNED

- Material shortage
- Late operation
- Failed quality check
- Traceability gap
- Delivery risk

NEXT STEP / DISCOVERY CONVERSATION

Where is operational friction costing you time, accuracy or visibility?

A focused discovery conversation maps the workflow, identifies the highest-value improvement and confirms whether integration, automation or system change is justified.

Start with the problem.

30-MINUTE DISCOVERY CALL

- Map the operational bottleneck
- Review systems and constraints
- Agree the sensible next step
