

Fast track to smarter productivity

Exine - traceability systems
for industry

exine.com

What we do

Our traceability solutions give SMEs the power to monitor and control the movement of assets through real processes. Capturing this core data allows us to provide higher level business support.

Take control

Struggling with observability, conformance or productivity? Don't worry, Exine has got you covered.

How can we help?

At Exine, we're born problem solvers. There's nothing we love more than to help a business beat a challenge and spark new growth.

We can help you:

- Unlock your team's full potential
- Tighten up process conformance
- Boost real-time information
- Reduce wasted time
- Gain clear insights to make informed decisions
- Offer unique services within your industry

Whatever it takes to help you achieve next-level productivity, we'll get you there.

Bespoke Solutions

No need to invest in off-the-shelf applications that make you adapt to the package. Our bespoke traceability systems boost operational efficiency, reduce manual errors, and provide clear, actionable insights.

System Development

Responsive, scalable, and secure web applications tailored to your business needs. More than pure traceability, a platform where your clients can access and interact with your services.

Electronics Design

We design and manufacture custom electronics, including the development of embedded software. These seamlessly link your physical assets and processes to our software.

Continued Support

Our systems are built for growth. And you can be sure we'll be around to support you as your business grows and your needs change.

How we work

Our approach isn't just for the here and now – it's for the future. You don't have to commit to anything until you get to the design stage. If you don't see a clear business benefit by that point, why would you go any further?

Our simple 5-step approach

CASE STUDY: INSURGO MEDIA

From in-house system to global traceability solution

Insurgo Media Services is a leader in tape media solutions, specialising in secure, complete and sustainable data destruction of magnetic tape. Despite advancements in cloud storage, tape media remains crucial for long-term data archiving.

Challenge

Insurgo needed an in-house traceability system. That system had to track valuable, data-sensitive assets to ensure real peace of mind.

Delivery

We created a system that has grown rapidly with their business. We developed multiple electronic products as well as the complete software solution.

Outcome

Over 1 million assets tracked - and counting! Insurgo's tracking system is so effective it has gone global and is used throughout the customer's entire supply chain. Their customers even have their own white-label portal to process assets themselves.

CASE STUDY: S2S GROUP

Boosting traceability and freeing up time

S2S Group refurbish and recycle used electronic assets. A long-standing client, Exine has been a partner for over 10 years. During that time, we've helped support significant growth.

What our clients say

Challenge

Recycling and refurbishing IT assets isn't easy. Challenges include data integrity, a large product mix and real-time observability. High-level traceability is crucial.

Delivery

Two tailored web applications. The first, designed for S2S employees, streamlines and controls processing workflows. Another offers an online portal where clients can book services, access reports, etc.

Our custom electronic scanners use RFID technology to quickly identify assets and reduce error in serial number entry.

Outcome

To date, there have been over 1.1 million assets tracked through the system and over 4.5 million processes recorded. The assets tracked have increased by more than 20X and our system still continues to free up employee time for more valuable use.

“ I have worked with Exine for over 5 years now and their ability to innovate and deliver has been fundamental in supporting Insurgo's growth. They have been incredibly flexible and responsive as Insurgo's fast growth has meant that requirements can often change.”

GAVIN GRIFFITHS
Insurgo Media

“ Working with Exine has been a game-changer for us. Their expertise in automation has allowed us to streamline our workflows and reduce manual tasks, giving our team more time to focus on strategic initiatives and client relationships.

From initial stages of development to ongoing support, Exine's team has consistently gone above and beyond to ensure our platform meets the highest standards of data security and efficiency.”

RACHEL HALL
S2S Group

We're here to help

DR RICHARD SHARPE

Richard has a background in mechanical engineering and a passion for industrial systems. He brings deep technical expertise and is committed to harnessing the full benefits of new technology.

DR AARON NEAL

Aaron has expertise in product design and electronics. He is also a committed advocate for 3D printing. His innovative thinking ensures that every design is both functional and perfectly tailored to our clients' needs.
