

MADE SMARTER CHALLENGE · MANUFACTURING PROCESS

Every batch measured. Every loss *quantified in £.*

Most batch & process manufacturers run production blind to their true cost per batch. Talos reconstructs theoretical versus actual cost for every run — surfacing the margin lost to price, usage and yield variance that spreadsheets never reveal. **Margin is the first thing the platform makes visible: the entry point, not the limit.**

THE FOUR LEAKS TALOS MAKES VISIBLE IN YOUR PROCESS

8–15%

Ingredient cost creep

Prices move weekly; recipes get repriced quarterly at best. The gap compounds silently across every batch.

3–12%

Yield variance uncaptured

Planned yield is tracked; actual yield per run rarely is — and the cumulative £ impact almost never.

1 in 3

Batches with hidden variance

Roughly a third of runs carry a material deviation — over-portioning, substitutions, line drift — uncoded.

£20–100k

Ghost stock draining cash

Capital tied up in ingredients with no active job — expiring, over-ordered, unmatched to the schedule.

Every deviation found and ranked by £ impact — from data you already export, your own numbers not industry averages. Margin is lens one; the same engine is what the wider platform is built on.

Stop running your
process blind. *Book a call.*
