

Helping Manufacturers to Improve
Productivity, Quality and Traceability

What Isn't Working?

Our clients find that paper based manual manufacturing systems aren't working well because:

- They are reliant on expensive, expert operators with vast product knowledge to produce consistently high-quality products.
- Managers get production information too late when stored on paper, leading to costly delays in production, delivery and purchasing.
- Paper systems are not scalable for high volumes or a wide product range, so you can't keep your customers happy as you grow.

Our Award Winning, user friendly manufacturing software controls, tracks and documents your production process with ease.

“Tascus helps us to make our products easily and with full traceability. We are now capturing assembly times which is helping us to streamline our processes. We have been using this system for several months and all the time we are improving our processes to be even better.”

Przemyslaw Kubicki, Wipac Technology

What We Do

Digital Work Instructions

Save you money by reducing mistakes and training operators up to 50% quicker. Digital work instructions ensure that the right instruction is in front of your operator at the right time.

Ensuring Compliance

Digital job cards and product routing ensure that correct manufacturing processes are followed for every product, and that a full traceable record is created. Clients use this to make ISO, AS... , TS... and customer compliance much easier.

Reduced Rework

In process quality checks ensure mistakes are identified immediately and do not progress forwards. This helps you to save time and money with reduced rework and scrap.

Increased Productivity

Production data collection and analytics will notify you of issues that are impacting your productivity and highlight what your opportunities for improvements are.

Improved On Time Delivery

By planning and tracking Work In Progress, you can see at a glance the status of manufacturing orders throughout your business. This ensures that orders are delivered on time and customers are kept updated.
