

PROOF OF WORK

Nine systems live. Sixty hours a month, measured.

Flow to Form builds automations for operations-heavy businesses, and we proved every pattern on ourselves first. Eight of the nine systems below run daily at Myrmex Group, the construction firm we also run. The ninth runs our own intake. The hours are measured on live traffic, not projected.

9

systems running live today

60 h

back every month, measured

85 h

more projected in client builds

What runs today

Booking to structured case

A client books. Numbered folders, tasks and team alerts are ready in seconds.

Invoice pipeline

Supplier invoices arriving by email are read, matched to projects and posted to Xero with VAT handled.

Deposit to delivery workspace

A paid deposit moves the job out of the sales pipeline into a dedicated delivery workspace.

Lost deals closed properly

Lost deals are closed and logged with a timestamp, so conversion rates stay readable.

Website intake

Our own audit form files the lead, notifies the team and opens the calendar. The system you reached us through.

Voice notes to site records

Site audio is transcribed; decisions and actions are extracted and filed as tasks.

Won deal to project ready

A won deal becomes a delivery-ready project with its full folder structure and task templates.

Income tracked as it happens

Proposals are logged and outcomes updated automatically as deals progress.

WhatsApp operations assistant

A plain-language message becomes a logged task, with the details extracted, in about twenty seconds.

How every build works

Phase one always produces drafts for your review: nothing posts, sends or commits without a person approving it. Accuracy is measured on your live traffic, and we close the loop only once it is proven, one workflow at a time.

For manufacturers and distributors. Orders and enquiries that arrive by email, PDF and WhatsApp are read, validated against your own prices and part numbers, and entered into your ERP or quoting system as drafts for your team to release. The first step is a short paid baseline that measures your current process in your own numbers, before anything is quoted.
