

MADE SMARTER CHALLENGE · ENTERPRISE MANAGEMENT

From shop-floor data to *boardroom decisions*.

No leadership team should run a batch & process operation on estimates and gut feel. Talos turns operational data into numbers you can act on — quantified, ranked, delivered board-ready. **The decision layer of the platform: the difference between operating blind and operating with sight.**

7

days to a board-ready report

A Health Report scaled to your data — executive summary, batch-by-batch variance, and the top three loss drivers in exact £ — walked through on a delivery call.

OPERATIONAL DATA, TURNED INTO ENTERPRISE DECISIONS

A

Board-ready Health Report

Written for an MD, not a consultant — top three loss drivers in £, with specific recommendations you can act on the same week.

B

Monthly margin monitoring

Each month's export compared against your baseline, with automated alerts for price spikes, yield drift and ghost-stock build-up.

C

Planning & control on measured reality

Decisions grounded in your actual cost and yield per line and shift — not quarterly estimates or gut feel.

D

Multi-site & group rollups

Consolidated margin intelligence across sites and group entities as you scale — standardised on one proven pipeline.

Every number comes from your own data — written for an MD, not a consultant. The goal isn't a one-off saving; it's never having to operate your business blind again.
